Exploration

Let's explore our solar system first.

There is so much to learn in this area of the universe.

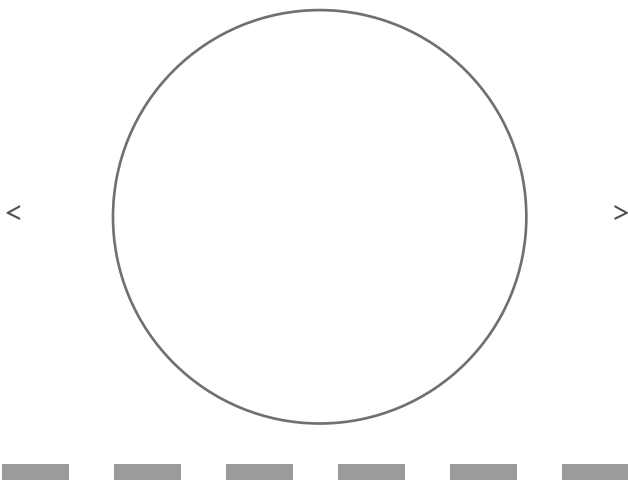

There billions of stars that we now know have their own planets orbiting around. But this one we call Solar System, we can reach and explore. This one is home...

logo

Sun

The Sun is our star and the center our system, common know as Solar system.

All the planets of the solar system orbits around the sun in various time. The further away the longer.

Mercury

Mercury is the first of the 4 rocky planets. It is so close to the sun that its temperature at the surface hits 400°C during the day. Days and night are very long, about 58 days. And because Mercury has no atmosphere, at night (surface away from the sun) the temperature drops at -200°C.
